

**Aim:**

Write a Java program that uses three threads to perform the below actions:

1. First thread should print "Good morning" for every 1 second for 2 times
2. Second thread should print "Hello" for every 1 seconds for 2 times
3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the `Printer` class which implements `Runnable` interface to take three arguments : **message**, **delay** and **count** of types **String**, **int** and **int** respectively.

Write code in the `Printer.run()` method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called `ThreadDemo` with the `main()` method which instantiates and executes three instances of the above mentioned `Printer` class as threads to produce the desired output.

[**Note:** If you want to sleep for 2 seconds you should call `Thread.sleep(2000);` as the `Thread.sleep(...)` method takes milliseconds as argument.]

**Note:** Please don't change the package name.

**Source Code:**

q11349/ThreadDemo.java

```
package q11349;

public class ThreadDemo {

    public static void main(String[] args) throws Exception {

        Thread t1 = new Thread(new Printer("Good morning", 1, 2));

        Thread t2 = new Thread(new Printer("Hello", 1, 2));

        Thread t3 = new Thread(new Printer("Welcome", 3, 1));

        t1.start();

        t2.start();

        t3.start();

        t1.join();

        t2.join();

        t3.join();

        System.out.println("All the three threads t1, t2 and t3 have completed execution.");

    }

}
```

```
class Printer implements Runnable {  
  
    private String message;  
  
    private int delay,count;  
  
    public Printer(String message,int delay,int count) {  
  
        this.message = message;  
  
        this.delay=delay;  
  
        this.count=count;  
  
    }  
  
    public void run() {  
        //long value =delay*1000;  
  
        for (int i = 0; i < count; i++) {  
  
            //Thread.sleep(value);  
  
            System.out.println(message);  
  
        }  
  
    }  
}
```

```
}
```

### Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Good morning
Hello
Welcome
Good morning
Hello
All the three threads t1, t2 and t3 have completed execution.
